Burakoff et al. (US Pat. 6,122,635) teaches a system for providing access to compliance information from one or more database sources. The compliance information is provided in filings known as regulated financial information documents (RFID) and are electronically submitted to regulatory agencies such as SEC and NASD. The system extracts the compliance information from the acquired securities information that is related to a particular security and provides the compliance information in a computer readable file.

Cwenar US 5,893,079 teaches a computerized data processing system having an external data interface for communicating with nonuser outside sources of investment data to process and deliver the data to a server for storage in a central database. The data delivered to the central database is in the form of data storage tables containing investment data. A data storage table may contain information with respect to an individual security, such as a description of the security, coupon, yield, price, CUSIP number, and issuer of the security. The system also provides compliance means which serves to compare a proposed trade with a group of rules which can be prioritized with respect to legal or business standards. The system can then provide
